Functional Test Data
Protocol bit use:

Output Bit	Function	Input Bit	Function
2	GROUP MODE 1 = OFF 0 = ON	2	GROUP MODE CONFIRMED 1 = GROUP 0 = INDIVIDUAL
1	PULSED MODE 1 = ON 0 = OFF	1	PULSED MODE CONFIRMED 1 = ON 0 = OFF
0	CONTINUOUS MODE 1 = ON 0 = OFF	0	CONTINUOUS MODE CONFIRMED 1 = ON 0 = OFF

Fault Finding

Problem	Possible Cause
No response or missing	Incorrect individual address setting Incorrect loop wiring
Fault condition reported	Incorrect group or individual address setting Incorrect wiring of sounder zone or fault input Faulty sounder Local supply faulty or incorrect polarity Fuse blown on sounder PCB
Sounders fails to operate	Incorrect wiring Incorrect group or individual address setting Fuse blown on sounder PCB control panel has incorrect cause and effect programming Faulty sounder Panel fault
Sounders operate continuously	Incorrect sounder zone wiring
Analogue value unstable	Dual address Loop data fault; data corruption

Sounder loading table

Load current (Amps)	Ambient Temperature (Deg C)
4	66-70
5	up to 65

Please note: If the unit is installed in applications above 65°C ambient temperature then please refer to sounder loading table (above) for safe operational use.

DIN-Rail Sounder Controller (5 Amperes) Installation Guide

General
The DIN-Rail Sounder Controller (5 Amperes), part no. 55000-182, is designed to be mounted in an enclosure, clipped on to a standard 35mm DIN-Rail (DIN 46277).

The installation must conform to BS5839 (or applicable local codes) and be carried out such that the unit is not subjected to:

Exposure to risk of mechanical damage

Unauthorised modification or interference

Exposure to moisture, dust and foreign bodies

Exposure to temperatures exceeding the maximum ambient

The address of the unit is set on segments 1–7 of the DIL switch. Segment 8 is used to disable the Fault LED if it is not required or the extra loop current to illuminate it is not available.

The unit is loop powered and controlled by the control panel using the output bits in the communication protocol. This unit is polarity sensitive.

If the unit is installed in applications above 65°C ambient temperature then please refer to sounder loading table (page 4) for safe operational use.

Installation
1. Run the cables from the loop, the sounder circuit and the fault contact connections (if required - see illustration) into the unit. Ensure that earth continuity is maintained.

2. Set unit address on segments 1–7 of the DIL switch (see address table.) Set group address if required.

   If the LED is to be disabled, set segment 8 of the DIL switch to 1.

3. Remove the backing strip from the lower portion of the label.

4. Fix the lower portion of the label firmly to the unit, ensuring the DIL switch access hole is covered.

5. Clip the unit to the standard 35mm DIN-Rail (DIN 46277)
   Please use end stops, part number 27447-528 or equalivent, at each end of the unit to secure it in place

Wiring Details

All wiring terminals accept solid or stranded cables up to 2.5mm².

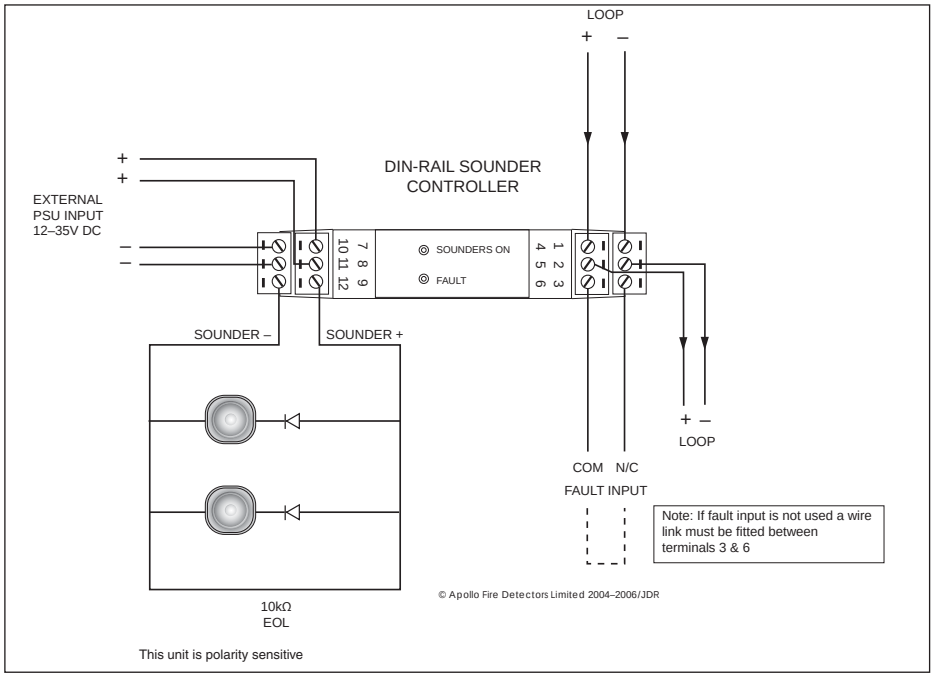

Fig 1 - Wiring diagram for the Sounder Controller

Maximum Loop Current Consumption at 28V

	LED enabled	LED disabled
switch-on surge, max 150mS	3.5mA	3.5mA
quiescent	1.5mA	1.5mA
sounders operated	1.7mA	1.7mA
fault	3.5mA	1.7mA

External supply

external supply	12 to 35V DC
sounder circuit voltage	12 to 35V DC
sounder circuit current (max.)	5A at 35V DC (resistive load)
fuse	5A quick blow

LED Indicators

- Sounders on illuminated red when sounder relay is energised (powered from sounder supply)
- Fault illuminated yellow under any fault condition except group address conflict

Commissioning

It is important that the DIN-Rail Sounder Controller (5 Amperes) be fully tested after installation. A Test Set, part no. 55000-870, may be used to carry out functional testing of individual units. The test set can also perform data integrity tests of an entire loop.

Troubleshooting

Before investigating individual units for faults, it is important to check that the system wiring is fault free. Earth faults on data loops or interface zone wiring may cause communication errors.

Many fault conditions are the result of simple wiring errors. Check all connections to the unit and make sure that the correct value resistors are fitted where necessary.

Address Setting

The Sounder Controller is polled by the control panel either individually or as part of a group. Two DIL switches are provided to set the individual and group addresses.

Individual Address Setting

The individual address of the Sounder Controller is set using seven segments of the eight segment DIL switch. The eighth segment is set to 1 if it is required to disable the fault LED. Each of the other seven segments is set to 0 or 1, using a small screwdriver or similar tool. A complete list of address settings is shown in the following table.

addr	DIL switch setting 1234567	addr	DIL switch setting 1234567	addr	DIL switch setting 1234567	addr	DIL switch setting 1234567	addr	DIL switch setting 1234567
1	1000000	11	1101000	21	1010100	31	1111100	41	1001010
2	0100000	12	0011000	22	0110100	32	0000010	42	0101010

105	1001011	110	0111011	115	1100111	120	0001111	125	1011111
								126	0111111

Group Address Setting

In group mode the Sounder Controller responds to an additional address referred to as the group address, which is used to activate groups of Sounder Controllers simultaneously. Individual units continue to respond to their own addresses and report their own status from their address in the normal way. A group address is set on a four-segment DIL switch which is factory set to 0000. A group address may be any spare address within - and only within the range 112 to 126 inclusive. The required group address is set by moving one or more of the segments on the switch to 1 in accordance with the following table.

addr	DIL switch setting 1234	addr	DIL switch setting 1234	addr	DIL switch setting 1234
112	1111	117	0101	122	1010
113	0111	118	1001	123	0010
114	1011	119	0001	124	1100
115	0011	120	1110	125	0100
116	1101	121	0110	126	1000

Note: group mode is disabled if the group address DIL switch is set to 0000, irrespective of the protocol message
